

Nexus

ldmdesign.org

Nexus allows you to use a maximum of 8 LDM Launchpad apps simultaneously. You can build a powerful live performance setup using s7epper, Paragome, Orbit, mLPr and Polyboing. You can also use multiple instances of the s7epper mk1, mLPr and Polyboing, which are available free on my site.

Setup

1. Simply place the patch anywhere in your Live set.
2. Put each LP app in a track within Live and setup instruments for each as you desire.
3. The patch should automatically connect to each app, which will appear on the GUI.
4. Otherwise press Reset and then Connect.
5. Now the right buttons on the Launchpad can be used to switch between each app, and all will run together as a suite.
6. There is a separate patch for use with the MK1 or MK2 Launchpad. That way if you have both Launchpads you can run multiple different apps on each one.
